

## Index Widem Deliverables

Deliverable N°	Deliverable title
D1.1	Instrumented wheelsets for two type of railway vehicles (tilting and freight train)
D2.1	Load spectra for two service profiles to be used in new design concept of wheelset and in fracture mechanics analysis
D2.2	Load time histories due to wheel and rail geometrical irregularities
D3.1	Validated flexible multi-body model
D3.2	Load spectra relative to two different railway vehicles
D4.1	Procedures for assessing material classical fatigue parameters on full scale components
D4.2	Procedures for assessing material fretting fatigue parameters on full scale components
D5.1	Endurance design procedure of wheelsets based on reliable load spectra and reliable Wohler curves
D5.3	Design according to the new methodology
D6.1	Development of compensated resonance inspection prototype for wheelsets
D6.2	Report on NDT performance (various techniques) for conventional wheelsets
D7.1	Procedure to define NDT periodicity as function of vehicle service profile.
D8.1	Assessment
